GADS Q&A

Maggie Peacock
Analyst, Performance Analysis

GADSWG Item of Interest

- Conventional data reporting instructions revisions (significant but mostly technical editing)
- IEEE 762 standard revision – may have an impact on GADS calculations
- GADS Solar – Target completion date of the data reporting instructions for NERC PC has been pushed back to March 2019
- Fuel failure flow chart – being developed to enhance GADS for more granular information on unit availability due to fuel assurance and energy security concerns. Next step is to present to the Natural Gas Supply Association

December 18, 2018 GADSWG Meeting

Presentation on modeling correlated failures from a group of PhD students from Carnegie Mellon University regarding how modeling generators in a power system to fail and recover independently of other generators is inconsistent with results from recent empirical work using four years of GADS data.
